Prepared for *23rd Journées Louis-André Gérard-Varet*
conference in public economics, 26-28 June 2024 in
Marseille, at the Palais du Pharo

Overview I

Economic diversification matters for sustainable development

- We explore potential benefits of diversification for Mongolia
- Compare Mongolia with its structural and aspirational peers to shed light on strategies to foster economic and societal diversification
- Examine the implications of declining demand for Mongolia's key minerals, primarily coal, resulting from climate change concerns
- Discuss pathways for Mongolia to diversify its economy by striking a balance of natural resources vs. human and social capital

Overview II

- We view diversification as a source of increased efficiency and growth and apply our argument to Mongolia after 1990
- Study cross-country patterns of diversification and growth, comparing Mongolia with two groups of peers to identify and illustrate channels through which diversification can support growth, based on a simple model of production possibilities
- Present nontechnical narrative, eschewing mathematics and econometrics, leaving room for technical testing of our findings in future work

Background: Diversification and growth

Diversification shifts production frontier outward

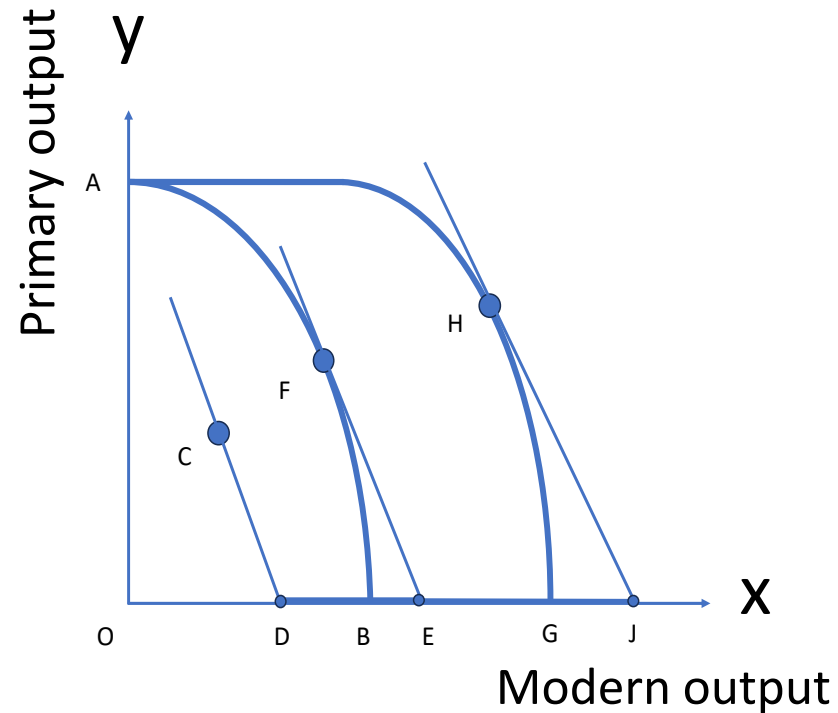

From unemployment to full efficiency through diversification

- **C** : Underutilized resources, with booms and busts, need stabilization
- From **C** to **F** : Full employment of all resources, entailing choice between primary output and modern output
- From **F** to **H** : Diversification, more efficiency, higher GDP per person

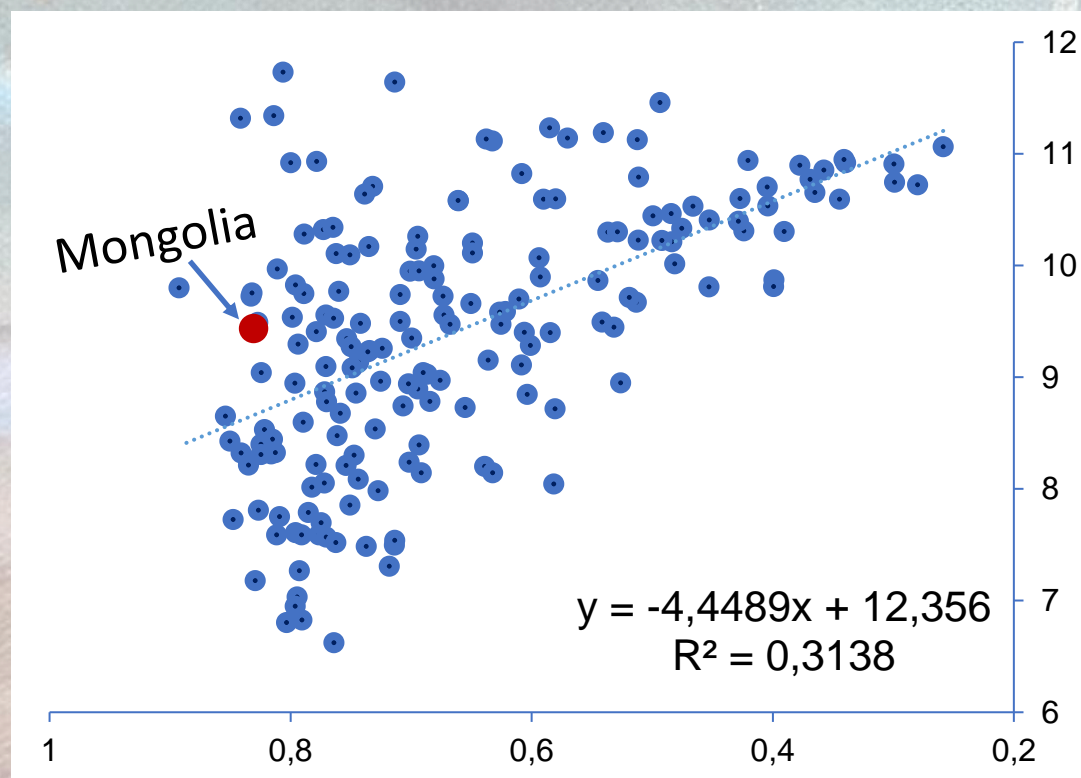

Diversification of production possibilities

- $y = a - \left(\frac{1}{2b}\right) x^2$
- $\frac{dy}{dx} = -\frac{1}{b}x = -1$
- $x = b$
- $y = a - \frac{b}{2}$
- $GDP = a + \frac{b}{2}$

Export diversification, concentration, and growth

Finger-Kreinin index of diversification
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 181 countries)

Herfindahl-Hirschman index of concentration
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 181 countries)

Sources: Authors' computations, based on UNCTAD and World Bank, *World Development Indicators*.

Export diversification, export quality, and growth

Theil index of diversification 1990-2014
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 174 countries)

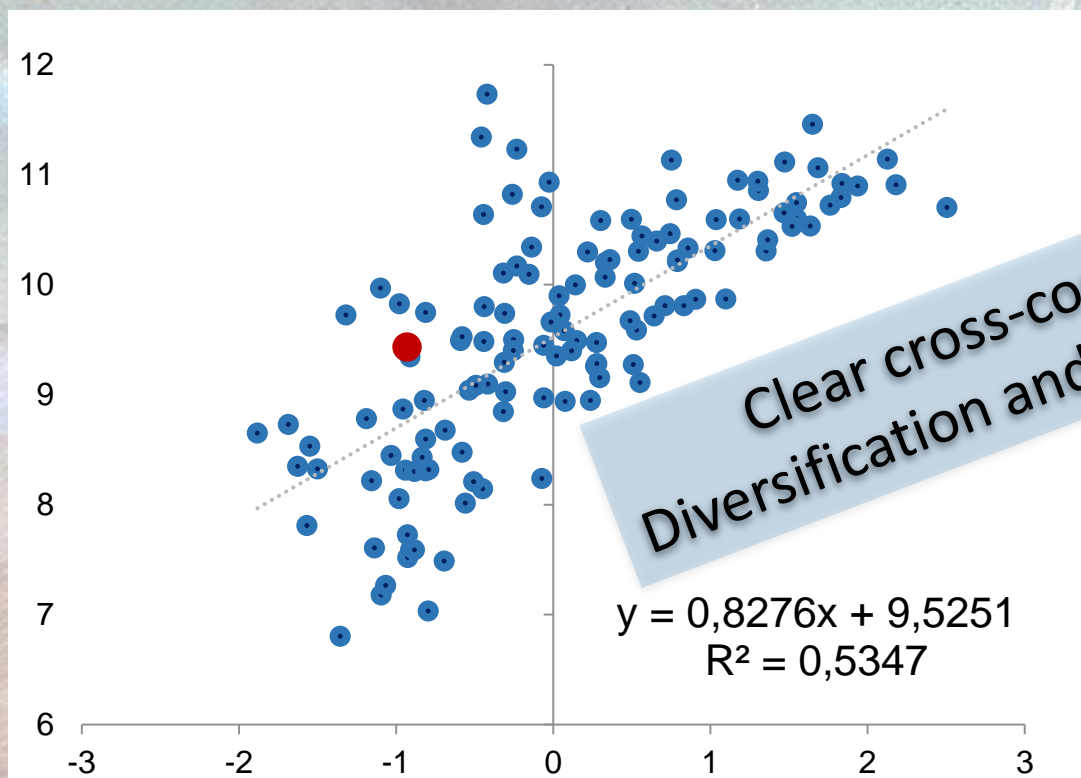

IMF index of product quality 1990-2014
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 159 countries)

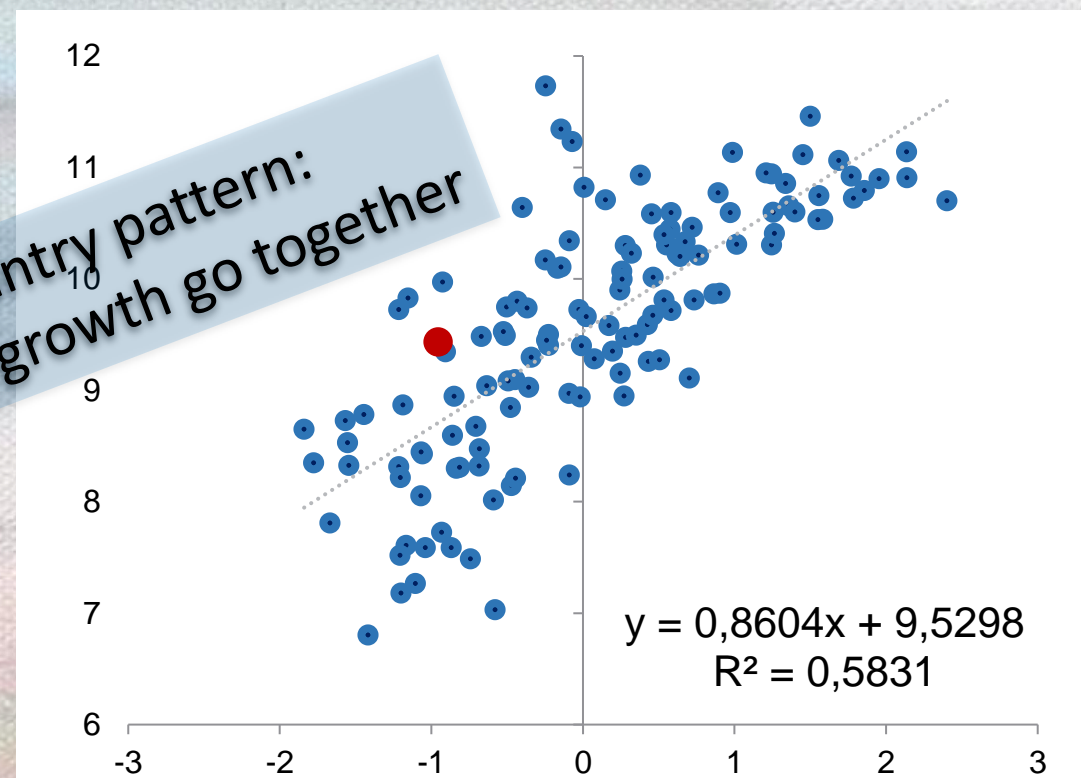

Sources: Authors' computations, based on IMF and World Bank, *World Development Indicators*.

Economic complexity and growth

Economic complexity (SITC)
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 174 countries)

Economic complexity (HS)
and per capita GNI 1995-2018
(USD, ppp, 2018 prices, 159 countries)

Clear cross-country pattern:
Diversification and growth go together

Aspects of diversification

Specialization boosts economic efficiency via gains from trade ...
... but there can be too much of a good thing

Three types of diversification, two economic, one political

- 1) Away from heavy dependence on a single sector or a few typically natural resource-based commodities (also, destinations)
- 2) Change toward increased complexity, quality, and variety of output
- 3) Away from dependence on political elites toward more democracy

Benefits of economic diversification for growth

Exemplified by widely observed inverse relationship between heavy natural resource dependence and long-run economic growth

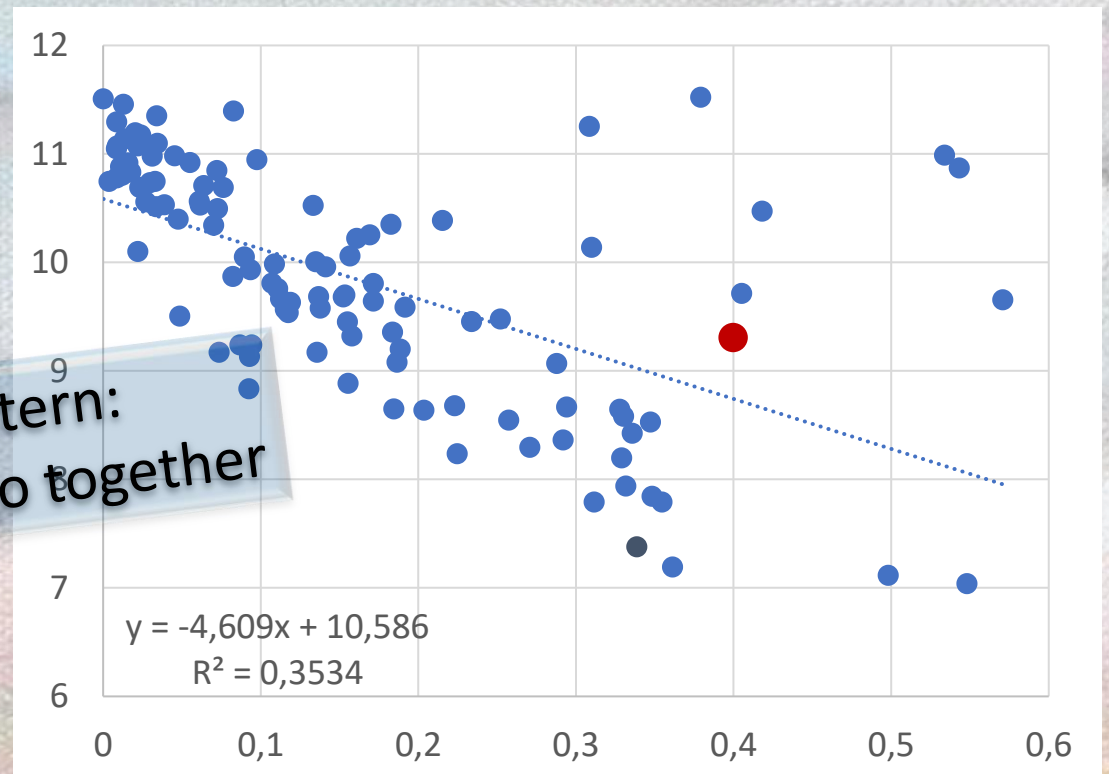

Economic diversification, natural capital, and growth, 1995-2021

Log of per capita GNI 2021
and EDI 2000-2021
(USD, ppp, 112 countries)

New data

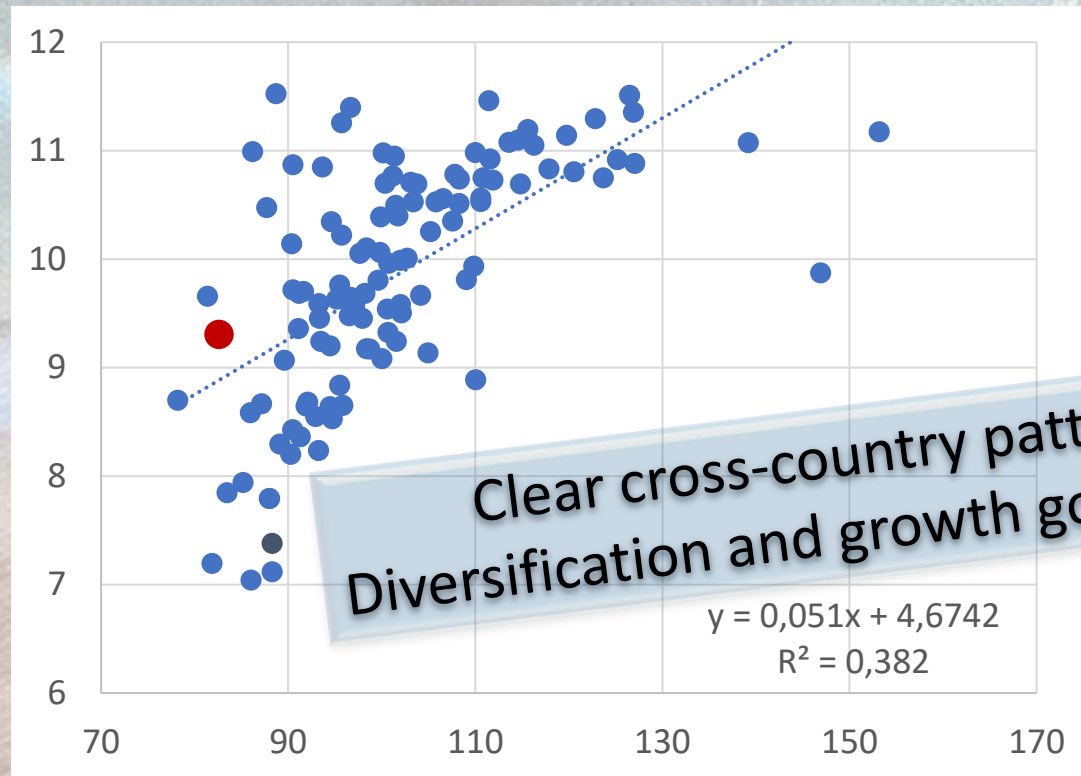

Log of per capita GNI 2021 and share of
natural capital in total wealth 1995-2018
(USD, ppp, 108 countries)

Economic and political diversification and growth, 1995-2021

Log of per capita GNI 2021
and EDI 2000-2021
(USD, ppp, 112 countries)

Log of per capita GNI 2021 and
democracy 2021
(USD, ppp, 112 countries)

Clear cross-country pattern:
Diversification and growth go together

Multiple regression analysis

$$GNI = a_0 + a_1 EDI + a_2 DEM$$

$$HDI = b_0 + b_1 EDI + b_2 DEM$$

	CONST	EDI	DEM	R ²
GNI	5.346 (8.6)	0.039 (5.7)	0.013 (3.8)	0.45
HDI	0.188 (2.4)	0.005 (6.0)	0.002 (4.4)	0.49

Note: 112 countries, t-values within parentheses.

Selected determinants of economic growth

GNI per person, life expectancy, and human development

Three sides a triangle (or a thick coin)

✓ Education

- Leave out investment and trade (except trade diversification)

✓ Economic organization and industrial structure

- Human vs. natural capital

✓ Democracy and governance

- Social capital: Equality, transparency, trust, etc.

Let us walk you
through the charts

Growth of per capita GDP (% per year), 1990-2018

Structural peers
(countries similar to Mongolia)

Aspirational peers
(countries Mongolia aspires to resemble)

Highlights I

Benign entanglement

- Good things tend to go together

Human vs. natural capital

- Mongolia is middle-of-the-road despite its relatively large stock of natural capital, with human capital on par with several peers
- Mongolia's resource rents are the largest among its peers

Realignment of fiscal policy

- Resource depletion fees can be used to generate revenue to reduce less efficient taxation or to mobilise outlays on education, health care, etc.
- Revenue from fees can be used to build up a sovereign wealth fund
Think Alaska, Norway, and more

Highlights II

Need for diversification to strengthen social capital

- Corruption has declined and resembles structural peers
- In terms of trust, Mongolia is broadly comparable with structural peers
- The rule of law in Mongolia surpasses its structural peers, but lags all of its aspirational peers
- Income distribution is not an issue for Mongolia
- Mongolian exports are less diversified than among most of its peers, but comparatively high-quality in terms of trading partners.
- The lack of foreign competition – i.e., lack of diversity – in Mongolian banking accords with general pattern of insufficient diversity

Highlights III

Mongolia has excelled in terms of political diversification

- By establishing a solid liberal democratic reputation in a challenging geographical neighbourhood

The strong state of Mongolian democracy should make it easier to pursue benign entanglement with popular support by

- Strengthening education and health care
- Reinforcing the rule of law
- Reducing corruption
- Reallocating resources along the lines of desirable economic diversification ...

As, e.g., Alaska (pop. 734,000), has managed to do

The End
